What's New in the?

Flash to Video Converter Pro is a simple-to-use tool that allows you to encode SWF files to MP4, MPG, AVI, 3GP and FLV. It can be handled by individuals of any experience level. The interface of the tool is plain and simple. You can use the Explorer-based layout to locate and select files for processing, since the "drag and drop" method is not supported. Batch processing is not possible. In the list you can check out the name, frames per second, frames and size of each video. All you have to do is specify the output destination and format, in order to proceed with the encoding task. But you can also customize audio and video parameters when it comes to the codec, size, bit rate, frames per second, channel mode, sample frequency rate, encoder quality and others. The video conversion software takes up a low amount of system resources, has a good response time, takes a long time to complete a task (as long as the length of the video) and delivers a fair image and sound quality. We haven't come across any problems during our tests. But there is no help file available and you cannot change the program's behavior (e.g. enable Flash to Video Converter Pro to automatically turn off the computer after encoding). We recommend this program with reservations.
